

RAINIER-S20 Early Adopter Program

Add your voice and experience to our innovative solutions

Do you have an avian tagging project coming up? We want you! Wildlife Computers is offering the chance to play a pivotal role in the validation of its new avian tag and its introduction to the market. Not only will you have access to the product roadmap but an opportunity to provide suggestions on new features before they are released.

The ability to purchase under the early adopter program will expire on or before December 31, 2019. Wildlife Computers reserves the right to cancel this program at any time.

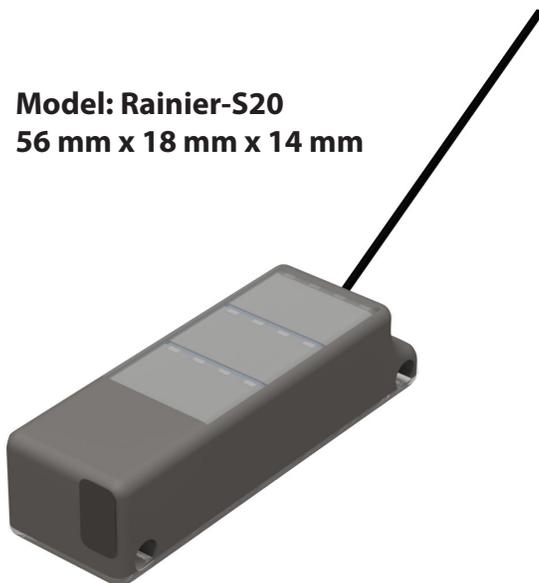

How Does the Program Work?

For every Rainier-S20 tag you purchase, you will receive one FREE—*up to the first five per client*. Once you receive your tags, you will have six months to deploy the free tags. As part of the program, you agree to provide periodic updates on your project, report any issues, provide feedback, and provide quotes and case study material. In return, you get free tags, dedicated, hands-on support with our Early Adopter Program team, and a first-hand look at the new features of future products.

Eligibility Requirements

- Participants must apply to the program
- Participants must have a qualifying project that meets the program's timeline
- Participants must agree to and sign the Early Adopter Program agreement
- Participants must be excited to participate and offer regular feedback

Model: Rainier-S20
56 mm x 18 mm x 14 mm

RAINIER-S20 Early Adopter Program—Continued

FAQ

Q: What do I get out of the program?

A: You get free tags to extend your research pool. You also receive a dedicated, hands-on support team, first-looks at new features, and a look at the upcoming roadmap for the product.

Q: How do I order my tags?

A: Once approved for the program, a technical sales consultant will contact you directly and help you place an order for your tags. Once the order is confirmed, and payment received, through the normal sales process, the TSC will create an addendum for the additional tags.

Q: Do I get to keep all the tags?

A: Yes, unless you cannot deploy the free tags within six months of receipt. Then you must send the tags back within 30 days or you will be billed for them.

Q: How will I know if I am accepted into the program?

A: Once we receive your application, you will hear from a technical sales consultant within two weeks via email with your acceptance or rejection.

Q: Does Wildlife Computers pay for the Argos fees?

A: No, the client is responsible for all Argos fees for the purchased and non-purchased tags.

Q: I don't want to participate because I don't want anyone knowing about my research before it is released.

A: As part of the agreement, Wildlife Computers agrees to not publicly disclose any information about the research until after publication or consent is given.

About Wildlife Computers

Wildlife Computers is the leading provider of advanced wildlife telemetry solutions. Propelled by its mission to promote the sustainable use of our global environment, Wildlife Computers creates the most innovative avian and marine technologies that empower data-driven decisions. The Rainier-S20 method of sending GPS locations and other data through Argos builds on Wildlife Computers more than 20 years of experience of sending information via satellite in the most challenging marine environments and time stamps each to within two minutes of the actual fix.
